EDUCATION

Florida State University

Tallahassee, FL

Masters of Science in Computer Science GPA: 3.85/4.00

Aug 2023 – May 2025

- **Relevant Coursework:** Advanced Algorithms, Advanced Operating Systems, Machine Learning, Advanced Data Science, Analytic Methods

Jawaharlal Nehru Technological University

Hyderabad, India

Bachelor of Technology in Computer Science & Engineering GPA: 3.13/4.00

Aug 2017 – Jul 2021

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL

Cloud/DevOps: AWS (Lambda, EC2, S3, CloudFormation), Azure, Docker, Terraform, GitHub Actions, Jenkins

Data/Tools: Pinecone, DynamoDB (NoSQL), PostgreSQL, Redshift (Data Warehouse), SSIS, QuickSight, Firebase

Frameworks/APIs: FastAPI, Spring Boot, REST APIs, gRPC, LangChain 0.2, LangGraph, SentenceTransformers, Gemini API

Front-end: React, Vite, Tailwind v4, shadcn/ui

EXPERIENCE

Florida State University - Information Technology Services

Tallahassee, FL

Data Intern

May 2024 – Dec 2024

- Automated data ingestion with **Python** and **AWS Lambda**, achieving 99%+ accuracy and streamlining operational workflows.
- Integrated the university's AIM system into a star-schema warehouse via optimized APIs, enhancing data governance and reducing manual reporting efforts.
- Developed **SSIS**-driven ETL workflows and semantic models to power daily enrollment dashboards, supporting real-time decision-making across 5+ departments.

Florida State University – Department of Computer Science

Tallahassee, FL

Research Assistant to Prof. Andy Wang

Jan 2024 – May 2024

- Designed a cross-version Android annotation tool using **Accessibility APIs** and **Intent interception**, increasing compatibility by 60% without requiring root access.
- Diagnosed and resolved OS-level instability by migrating from **Riru** to **Zygisk**, significantly enhancing module reliability across diverse Android builds.

Infosys – Florida Power & Light

Hyderabad, India

Data Engineer

July 2021 – Aug 2023

- Developed scalable **ETL pipelines** using Spring Boot and AWS to process telemetry, improving throughput by 30%.
- Implemented **serverless microservices** via **Lambda** and integrated **monitoring** with CloudWatch to reduce downtime by 40%.
- Revamped **SSIS** workflows and optimized semantic layers, accelerating business reporting by 35% and reducing refresh times across dashboards.
- Migrated legacy FTP-based ingestion to secure **SFTP** protocols and designed scalable schemas in **DynamoDB**, improving compliance and data access speed under peak load.
- Automated infrastructure deployments using **CloudFormation** and Jenkins, boosting CI/CD reliability and reducing deployment rollbacks; fine-tuned SQL Server indexing to cut query time.

PROJECTS

RAG Roadmap Generator | Website | GitHub

- Built a serverless web app that helps users auto-generate customized LLM learning roadmaps based on topic input, using **React**, **Gatsby**, and **Netlify Functions**.
- Orchestrated a **RAG pipeline** using **Pinecone**, **SentenceTransformers**, and **Gemini API** via **LangGraph** and **Python asyncio**, delivering responses in under 1 second.
- Implemented full CI/CD with **GitHub Actions** and **Netlify**, and set up schema tests, performance monitoring, and logging through **Firebase** for reliable deployments.

PineStream AI | GitHub

- Engineered a dual back-end architecture with **FastAPI** + **Pinecone** microservice and a **LangChain 0.2 ConversationalRetrievalChain** variant powered by **Gemini 2.5 Flash**, enabling instant A/B deployment flexibility.
- Built a one-click ingestion pipeline (**Python**, **SentenceTransformers**) to chunk **PDFs** and **source code** and upsert 100% of content to **Pinecone** in under 30 s, boosting data-prep productivity by 5×.
- Delivered a **React** + **Vite** front-end (**Tailwind v4**, **shadcn/ui**) that streams responses, auto-scrolls, and surfaces inline source citations, reducing onboarding time for non-technical volunteers.
