EDUCATION

Florida State University

Tallahassee, FL

Masters of Science in Computer Science GPA: 3.85/4.00

Aug 2023 – May 2025

- Relevant Coursework: Advanced Algorithms, Advanced Operating Systems, Machine Learning, Advanced Data Science, Analytic Methods

Jawaharlal Nehru Technological University

Hyderabad, India

Bachelor of Technology in Computer Science & Engineering GPA: 3.13/4.00

Aug 2017 – Jul 2021

TECHNICAL SKILLS

Languages: Python, SQL, Java, Bash

Cloud & Data: AWS (Lambda, S3, Glue, EMR, DynamoDB, Kinesis), Apache Airflow, Databricks, Snowflake, SSIS, PySpark

Databases & Warehousing: PostgreSQL, Redshift, MySQL, Hive, HBase

Streaming & Messaging: Apache Kafka, AWS Kinesis, Amazon SQS

Frontend: React, Gatsby

Infrastructure & Orchestration: Terraform, CloudFormation, Kubernetes, GitHub Actions, Jenkins, Docker

Monitoring & BI: Prometheus, Grafana, Power BI, QuickSight, Tableau

Tools & Practices: Git, Linux, Agile/Scrum, unit testing, data modeling, CI/CD

EXPERIENCE

Infosys – Florida Power & Light

Hyderabad, India

Data Engineer

Jul 2021 – Aug 2023

- Engineered high-performance RESTful microservices in **Java/Spring Boot** handling 1M+ queries/month with 99%+ uptime and auto-scaling capabilities.
- Built **AWS Lambda** event-driven architectures with **DynamoDB** and **S3**; implemented circuit breakers, reducing query time by 25% and downtime by 40%.
- Migrated legacy **FTP** systems to secure **SFTP** with end-to-end encryption; improved data integrity and reliability across distributed environments.
- Automated **CI/CD** pipelines using **Jenkins** and **AWS CloudFormation** for containerized services, enabling zero-downtime deployments and IaC.

Florida State University – Information Technology Services

Remote

Data Intern

May 2024 – Dec 2024

- Built real-time data ingestion pipelines using **Python** and **AWS Lambda**, achieving 99%+ accuracy across a distributed microservices architecture.
- Developed **ETL** workflows with **SSIS** feeding live dashboards in **QuickSight**; enabled real-time analytics for 5+ departments.
- Integrated **AIM** system APIs into a **Redshift** star schema; optimized data models and queries, cutting manual reporting overhead by 60%.
- Created automated data validation frameworks with comprehensive error handling to ensure consistent reporting across multiple sources.

Sayaam for All

Remote

Full-Stack Developer

Jun 2025 – Present

- Built geospatial indexing using **Python** + **Uber H3** to index 5K+ volunteers; designed optimized **DynamoDB** schemas for sub-second geo lookups.
- Containerized **FastAPI** and **Pinecone** services with **Docker** on **Kubernetes**; implemented REST APIs for real-time matching algorithms.
- Developed skill+location matching APIs on **AWS Lambda** with **CloudWatch** monitoring and **Grafana** observability dashboards.
- Automated infrastructure provisioning with **AWS CloudFormation**, enabling reproducible environments and safe rollback.

PROJECTS

Portfolio Risk Analytics Dashboard | GitHub

- Built a production-ready financial analytics platform with advanced risk metrics (**VaR**, **Sharpe Ratio**, **Max Drawdown**) and a comprehensive **pytest** suite.
- Implemented portfolio optimization using modern portfolio theory with heuristic algorithms and rebalancing suggestions.
- Created interactive **Streamlit** dashboards with **Plotly** for correlation matrices, rolling volatility, and benchmark performance analysis.

RAG Chatbot for NGO | GitHub

- Developed retrieval-augmented chatbot with dual implementations (classic **Python** and **LangChain 0.2**) for NGO Q&A.
- Built a modular **ConversationalRetrievalChain** with live-website fallback and **Pinecone** vector search.
- Designed scalable **FastAPI** endpoints supporting single-file and modular folder architectures with **Gemini** API integration.

RAG Roadmap Generator | Website | GitHub

- Built a responsive **React/Gatsby** web app with **Netlify Functions** backend to auto-generate personalized learning roadmaps from topic input.
- Orchestrated a RAG pipeline with **Pinecone**, **SentenceTransformers**, and **Gemini** via **LangGraph** and **Python asyncio**, delivering < 1s responses.

Reddit Trends Analysis Pipeline | GitHub

- Built an end-to-end **Python** ETL pipeline ingesting 10M+ Reddit posts/day into **PostgreSQL** and **Redshift** with automated cleaning and normalization.
- Orchestrated **Apache Airflow** DAGs for scheduling and dependencies, reducing manual overhead by 90% and cutting query latency by 40%.
